

# TEXAS: ONE OF 2018'S HOTTEST SOLAR + STORAGE MARKETS

Texas produces

**more renewable energy**

than any other US state

**1,900 MW**

of coal and older nuclear  
plants in the State are  
due to be retired

Ranking Texas

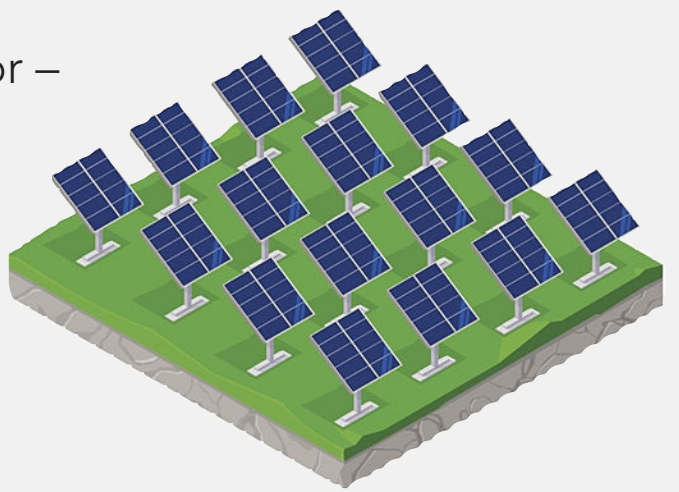

**second in the USA**

for new solar PV growth after California

ERCOT – the state's grid operator –  
predicts around

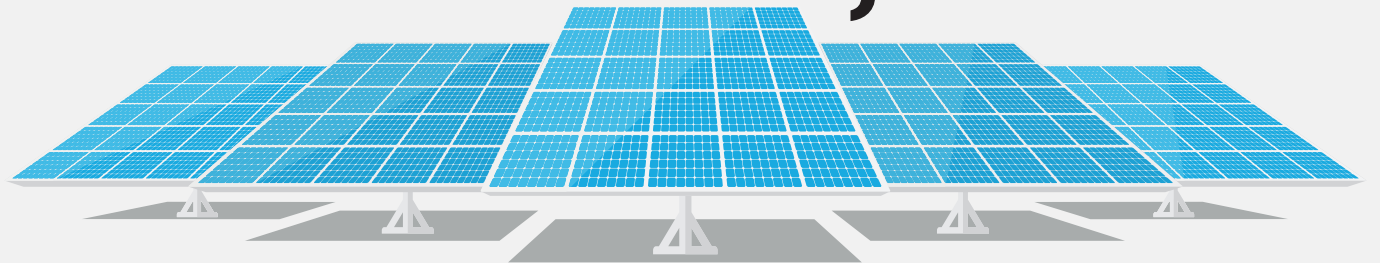

**3,000 MW**

of new PV projects set to come  
online in 2020

SEIA predicts an additional

**4,671 MW**

of new solar installations over next 5 years in the state

To put that into perspective,  
Texas' peak demand was  
around

**71 GW**

in 2016
