

RPA with Blue Prism:

Low-code enterprise Robotic Process Automation

Leading organizations are aggressively working towards cutting-edge customer experiences as well as more speed, flexibility, and lowering cost among processes—without sacrificing quality. In short, they want to redefine how work gets done. However, they are hindered by manual processes and legacy infrastructure.

Appian RPA with Blue Prism can help. This comprehensive enterprise automation solution combines business process management, robotic process automation, artificial intelligence, data, and integration to drive rapid impact.

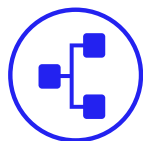

RPA Capabilities

Low-code, visual, and reusable design:

Create robotic automation tasks in an intuitive, drag-and-drop interface with no coding required. Business or expert users can design, maintain, and manage any process through a building-blocks approach designed for reuse.

Works with any platform: Use Appian RPA with any application or platform (mainframe, Windows, WPF, Java, web) in a variety of ways, including terminal emulator, thick client, thin client, web browser, Citrix, and web services.

Centralized management: An administration console controls, monitors, executes, and schedules robot process execution.

Scalability and resilience: Object-oriented design, reusable objects, and libraries allow for rapid scalability and easy maintenance. Load balancing, redundancy, and failover enable digital workforce resilience.

Robust security: Appian RPA features easily monitored autonomous robots that allow you to facilitate Active Directory integration, encrypt data at rest, communicate between resources, and securely, privately store network and software credentials.

Centralized governance, compliance, and change management: Achieve full visibility, traceability, and control over your digital workforce with proven support of PCI-DSS, HIPAA, and SOX compliance processes. Plus, side-by-side comparison of process changes allows for seamless change management.

Use Appian RPA with Blue Prism to build low-code apps.

Appian's low-code platform empowers organizations to build impactful applications up to 20x faster.

Achieve greater end-to-end automation:

Use software robots at various points within a business process to eliminate manual or repetitive work. Powerful process orchestration, exception-handling, and integration capabilities enable end-to-end business process automation—and bigger business impact.

Collaborate seamlessly: Automate task handoff between people and software robots with an audit trail of interactions. Route human-assigned tasks to the right person or team at the right time. Associate assigned tasks with a completion time, or escalate or prioritize them as needed to make sure the collaboration is effective and the overall process stays on track.

Modernize and extend legacy system ROI:

Use Appian RPA with Blue Prism to rapidly build modern applications, improve customer experience, and achieve operational efficiencies without undergoing massive changes. This virtual workforce automates legacy systems for which integration is difficult or impossible.

Use analytics to optimize business processes and identify process improvement opportunities:

Gain greater visibility over the entire business process with access to the data associated with running processes. Analyze process data to uncover bottlenecks or identify digital workforce opportunities within the overall business process.

The one-stop-shop for your enterprise automation needs.

Appian RPA with Blue Prism low-code development platform accelerates the creation of high-impact business applications. Appian further ensures customer success with leading services for integration, product support, and implementation. Benefit from:

- A single product offering designed to address all your automation needs.
- Pre-built RPA Management application that provides RPA Control Center, RPA Lifecycle Management and Global RPA Exception and Case Management.
- Robust low-code development and integration that follow best practices on using BPM, RPA, and AI capabilities together.
- Working with one contract, one support line, and one vendor.

Appian provides a low-code automation platform that accelerates the creation of high-impact business applications. Many of the world's largest organizations use Appian applications to improve customer experience, achieve operational excellence, and simplify global risk management and compliance.
