

Tech leaders strain to deliver in Australia.

The Economist Intelligence Unit, sponsored by Appian, conducted a survey of Australian business and IT leaders.

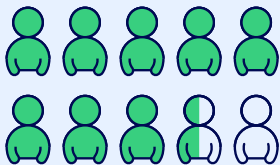

Survey results show Australian IT departments are under huge strain to deliver on an unsustainable backlog of digital transformation projects.

Backlog.

Australian IT project backlogs are already **3 months to a year**.

Business project requests dwarf IT budget growth.

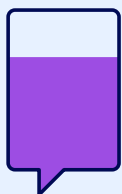

85% of Australian tech leaders report that growth in business project requests dwarf IT budget growth. **This is significantly higher than the global response of 64%.**

Non-IT business units.

63% of Australian executives agree that non-IT business units take the lead in procuring or developing most of the applications that they use. The sentiment is strongest among Australian IT decision-makers, three quarters (76%) of whom agree. **This is more than the global average of 55%.**

Project cancellations.

71% of business leaders report they have had to cancel a digital business project because the solution couldn't access the right data. **This is much higher than the global average of 54%.**

Area for improvement.

Four in five Australian business leaders believe that their organisation needs to improve its IT infrastructure and applications in order to better adapt to external change.
