

Auto and Equipment Finance Orchestration

Transforming your auto and equipment finance processes with speed, simplicity and confidence

Modernizing an auto and equipment finance platform raises several important questions. Beyond the design of the target architecture and the selection of technologies is this one: How can we integrate and orchestrate our end-to-end processes, data and systems?

Most auto and equipment finance organizations rely on multiple, disparate systems to support customer relationship management, origination, underwriting and credit adjudication, deal booking and servicing. What's more, critical business data is distributed, even duplicated, in different formats across the many systems. As they implement Band-Aid orchestration approaches, many lenders wonder if there's a better way.

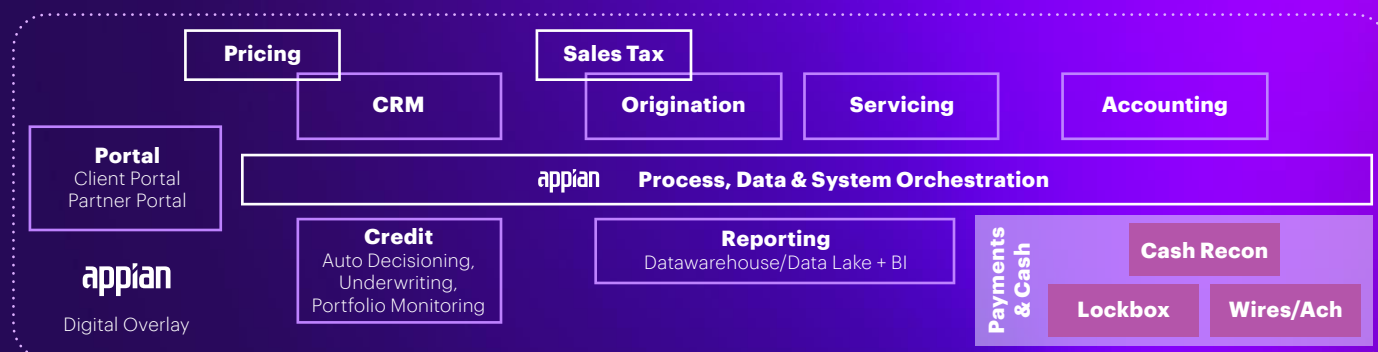

Introducing a powerful, modern solution designed for auto and equipment finance

 <h3>Orchestrate Systems</h3> <p>Integrate multiple systems and their data in a single auditable application</p>	 <h3>Orchestrate Data</h3> <p>Define the multiple sources and stewards for data and associate them with the relevant pieces of the process</p>	 <h3>Orchestrate Processes</h3> <p>Manage the steps needed to accurately and quickly take a loan through multiple systems across multiple departments</p>	<p>Appian and Accenture are partnering to provide a better solution for bank-owned and manufacturers' captives in auto and equipment finance—a single end-to-end platform that integrates, automates and orchestrates the processes, data and systems supporting loan and lease processing, management and monitoring.</p>

The auto and equipment finance platform—reimagined

Appian supports the efficient end-to-end integration and orchestration of your processes, data and systems, thanks to its low-code capabilities.

What our clients are saying

"We've reduced cycle times for loan and lease applications, gained vastly improved visibility into the status of applications, fulfilled Comprehensive Credit Reporting compliance requirements with ease, and been able to expand into new markets in months rather than years."

3 key levers enable Intelligent Operations

We use process re-engineering, digitization and automation, and operating model optimization to develop a superior experience for your customers, dealers and employees.

Process Re-engineering

Creating streamlined and efficient processes through process re-engineering

Technology & Automation

Employing four intelligent automation capabilities:

- Intelligent process and task mining
- Document-understanding AI
- Intelligent workflow
- Scaling automation and AI

Operating Model Optimization

Optimizing your operating model to produce sustainable tangible benefits

Accenture's industry experts have worked with the world's top banks and specialty lenders. Our expertise in auto and equipment lending and intelligent operations drives features and guidance that address lenders' business processes, regulatory requirements, pain points and goals.

The industry-leading Appian platform brings it all together, delivering process management, data management, workflow and intelligent automation capabilities through a single tool. As a full low-code automation platform, it integrates with legacy systems and augments your capabilities to adapt to business requirements without any custom coding.
