

Quarterly Commentary—Q4 2023

## Macro Opportunities Fund

Mutual Fund | Fixed Income

## Market Review

Faced with a series of strong economic data releases, the market has increasingly come to the conclusion that the economy is structurally better able to withstand higher interest rates than it really is. This dynamic can be seen by decomposing the move in Treasury yields, with the selloff almost entirely due to real yields rather than inflation expectations, with the move most pronounced at the back end of the yield curve. Digging further, however, a large portion of this shift is due to a rising term premium, indicating greater uncertainty about the outlook.

Many forecasters are extrapolating this year's economic strength without recognizing growth has benefited from a number of factors this year that are unlikely to be repeated, namely a huge expansion of the fiscal deficit, a major slowdown in inflation, and a rebound in labor supply. As these factors fade, the headwinds from tight monetary policy will be more

Performance displayed represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate so that when shares are redeemed, they may be worth more or less than original cost. Current performance may be lower or higher than the performance data quoted. For up-to-date fund performance, including performance current to the most recent month end, please visit our website at [GuggenheimInvestments.com](http://GuggenheimInvestments.com). Load performance reflects maximum sales charges or contingent deferred sales charges (CDSC) as applicable. A Class shares have a maximum sales charge of 4.00%. Effective 10.1.2015 the A Class maximum front-end sales charge was changed from 4.75% to 4.00%. For performance periods that begin prior to 10.1.2015, a 4.75% load was used and for performance periods that begin after 10.1.2015, a 4.00% load was used. C Class shares have a maximum CDSC of 1% for shares redeemed within 12 months of purchase.

Unless otherwise noted, data is as of 12.31.2023. Data is subject to change on a daily basis. Partial year returns are cumulative, not annualized. Returns reflect the reinvestment of dividends. The referenced index is unmanaged and not available for direct investment. Index performance does not reflect transaction costs, fees, or expenses. Index data source: FundStation.

<sup>2</sup> The Net Expense Ratio reflects a contractual fee waiver by the Adviser through February 1, 2025, to limit the ordinary operating expenses of the fund. <sup>3</sup> The Adjusted Expense Ratio ("Adjusted") is based on the Net Expense Ratio, but excludes certain investment expenses, such as interest expense from borrowings and repurchase agreements and dividend expense from investments on short sales. <sup>4</sup> Inception date of benchmark return is that of the fund's oldest share class. <sup>5</sup> As of 12.31.2023. SEC 30-day yield is a standard yield calculation that allows for fairer comparisons of bond funds. It reflects dividends and interest ("income") earned during the most recent 30-day period after the deduction of the fund's expenses and is calculated by dividing the income per share by the maximum offering share price on the last day of the period. Unsubsidized SEC 30-day yield is what the yield would have been had no fee waivers and/or expense reimbursement been in place.

## Overall Morningstar Rating™

★★★★ Institutional

Based on risk-adjusted returns out of 286 Nontraditional Bond funds. As of 12.31.2023.<sup>1</sup>

## Symbols and CUSIP Numbers

	Symbol	CUSIP
Institutional	GIOIX	40168W582
A Class	GIOAX	40168W616
C Class	GIOCX	40168W590
P Class	GIOPX	40169J804
R6 Class	GIOSX	40168W111

SEC 30-Day Yield<sup>5</sup>

	Subsidized	Unsubsidized
Institutional	6.43%	6.34%
A	5.77%	5.77%
C	5.27%	5.27%
P	6.02%	6.02%
R6	6.42%	6.41%

<sup>1</sup> Past performance is no guarantee of future results. The Institutional Class was rated, based on its risk-adjusted returns, 4 stars for overall, 3 stars for 3 years, 4 stars for 5 years, and 5 stars for 10 years among 286, 286, 251, and 160 Nontraditional Bond funds, respectively. The Morningstar Rating for funds, or "star rating", is calculated for managed products with at least a three-year history and does not include the effect of sales charges. Exchange traded funds and open-end mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics.

## Market Review (Continued)

apparent—headwinds that will only grow in strength. And the longer monetary conditions stay tight, the greater the risk of something breaking (banks and commercial real estate remain key risks). All this means that the recent economic trajectory cannot be assumed to continue, especially given the substantial restraint that will be imposed by the recent rise in long-term borrowing costs.

Uncertainty is elevated, and rightfully so given the diverging signals in the data and many traditional economic models not “working” as they should. This uncertainty extends to the Federal Reserve (Fed), which looks set to hold off on further rate hikes while it waits to see if the data start to align better with softening conditions policymakers say they are hearing on the ground. We continue to think the gravitational pull of tight money and credit conditions will result in a slowing economy and cooler inflation over the next year, paving the way for more rate cuts than the market expects.

### Summary:

- *Faced with a series of strong economic data releases, the market has increasingly come to the conclusion that the economy is structurally better able to withstand higher interest rates than it really is.*
- *This dynamic can be seen by decomposing the move in Treasury yields, with the selloff almost entirely due to real yields rather than inflation expectations, with the move most pronounced at the back end of the yield curve.*
- *A large portion of this shift is due to a rising term premium, indicating greater uncertainty about the outlook.*
- *The magnitude of the move in the market is overdone, and it is a mistake to think strong economic data will continue and that the impact of monetary tightening is behind us.*
- *We continue to think the gravitational pull of tight money and credit conditions will result in a slowing economy and cooler inflation over the next year, paving the way for more rate cuts than the market expects.*

## Performance Review

The fund finished the fourth quarter up +4.77 percent, bringing the year-to-date performance to +9.65 percent.

Duration positioning contributed +2.15 percent to absolute performance as the U.S. Treasury curve rallied dramatically with 2-year and 30-year Treasury yields falling by 79 bps and 67 bps, respectively. The fund add some duration risk into the rate back-up early in the quarter through Agency mortgage-backed securities (MBS) purchases, ultimately benefiting from the rally by the end of the period. Carry, or earned income, remained a consistent source of absolute performance for the fund, adding approximately +1.95 percent. Credit spreads moves contributed +0.75 percent to absolute performance as the Bloomberg Investment Grade Corporate Bond Index and Bloomberg High Yield Corporate Bond Index tightened by 22 bps and 71 bps, respectively.

### Sector Allocation (% of Net Assets)

#### Fixed Income

High Yield Corporate Bonds	21.2%
Bank Loans	13.8%
Asset-Backed Securities	13.6%
Investment Grade Corporate Bonds	9.7%
Non-Agency Mortgage-Backed Securities	7.5%
Collateralized Loan Obligations	7.1%
Preferred Securities	5.0%
Other Fixed Income <sup>1</sup>	2.7%
Non-Agency Commercial Mortgage-Backed Securities	1.2%
Military Housing	0.6%
Private Placements	0.3%
U.S. Treasuries	0.0%
Equity	1.1%
Alternatives	2.3%
Derivatives	1.5%
Net Short-Term Investments	12.35%
Short-Term Investments <sup>2</sup>	12.64%
Leverage/Reverse Repos	-0.29%

#### Portfolio Characteristics

Weighted Average Life (WAL) to Worst <sup>3</sup>	5.4
Number of Holdings	757
Effective Duration <sup>4</sup>	2.4
Average Price <sup>5</sup>	\$87.0

<sup>1</sup> Other Fixed Income includes fixed income mutual funds, closed end funds, and other miscellaneous fixed income instruments. <sup>2</sup> Short-Term Investments may include uninvested cash, net unsettled trades, money market funds, commercial paper, repos, and other liquid short duration securities. <sup>3</sup> Weighted average life (WAL) to worst represents the weighted average number of years for which each dollar of unpaid principal on a fixed-income security remains outstanding. This calculation is made by making the worst-case scenario assumptions on the issue, assuming any prepayment, call, or sinking fund options are used by the issuer. <sup>4</sup> Weighted average effective duration of the securities comprising the fund portfolio or the index. Effective duration takes into account any embedded options (i.e., a put or a call) and reflects the expected change in future cash flows caused by the options in response to changing interest rates. <sup>5</sup> Average Price excludes zero coupon, interest only and principal only bonds, preferred securities not priced at 100 par, and other alternative sector buckets when applicable.

## Strategy and Positioning

Over the past several quarters the fund has prioritized diversification, quality, and liquidity as recession risks remain elevated. To that end, the fund has steadily rotating positioning up-in-quality and more defensively, uniquely, without having to materially sacrifice yield due to the flatness of the yield curve and relatively limited spread premiums for quality. While spreads for many credit sectors reverted to long term average levels, certain segments remain dislocated and offer attractive relative and absolute value. Structured credit is acutely cheap, particularly when compared to broader fixed income spread sectors. The basis between structured credit spreads and investment grade corporate spreads currently sits wide of the 90<sup>th</sup> percentile of historically observed data.

The corporate credit allocation, which represents roughly 42 percent of the fund's holdings, has increasingly shifted higher quality. 33 percent is below investment grade rated, weighted towards BB-rated high yield bonds, and 9 percent is investment grade rated. While in our view, index-level corporate credit spreads are trading around fair value level, there remain many idiosyncratic opportunities and risks across certain issuers and industries given tighter credit conditions across capital markets this year. We expect increased bifurcation within credit markets in future quarters and have positioned the Fund accordingly. Primary market offerings priced at especially attractive levels as investors pulled back from lending activities this year, presenting a unique opportunity for the fund to capture risk premiums. The fund has employed modestly sized credit hedges to protect the fund from potential spread widening.

Structured credit represents 28 percent of the fund's allocation. Spreads continued their rebound for the year, but broadly remain wide, both compared to similarly rated investment grade corporate credit and in absolute. Furthermore, the lower dollar prices of these assets following the rise in interest rates sets up the potential for higher total return opportunities than typically exists in the asset class. With much of the sector's active buying base coming from

income-focused accounts, structured credit spreads should continue to compress from the resetting higher of yields and the resulting increased interest that comes with it. Within securitized credit, we continue to focus on opportunities senior in the capital structure with sufficient credit enhancement and often unique structural features that limit cash flow variability or extension risks. We believe the focus on superior structures is paramount to mitigate mark-to-market risks that could emerge should volatility rise.

Elevated rate volatility and other technical pressures have driven significant spread widening in the Agency MBS market, which was particularly pronounced in the 4<sup>th</sup> quarter. The fund added to its allocation, taking exposure up to approximately 8 percent, favoring higher coupon pools that were trading historically wide. By the end of the quarter, much of the cheapness had dissipated, although the asset class still offers attractive defensive carry at this point.

As we reflect on the past couple years, it is safe to conclude that we have come through a period of unprecedented volatility. The turbulence in fixed-income markets over the past couple of years has provided a very attractive entry point for longer-term investors, particularly with the Fed having now signaled a pause in its rate hike campaign. Fixed income generally performs well during pause phases of the monetary policy cycle and potential rate cuts may add further tailwinds for the sector. The heightened probability of a recession over the next 6-12 months as indicated by traditional models continues to support defensive and conservative positioning within the fund, which is prioritizing quality (which takes multiple forms including industry market leaders, more conservatively positioned balance sheets, and stronger creditor protections). Though the recent rally in interest rates and tightening of credit spreads have likely pulled forward some of the future total return potential of parts of fixed income, we still view the go-forward valuation proposition of fixed income as historically attractive at current levels.

**Basis point:** One basis point is equal to 0.01%. **Carry**—The difference between the cost of financing an asset and the interest received on that asset.

**Risk Considerations This fund may not be suitable for all investors.** Investments in fixed-income instruments are subject to the possibility that interest rates could rise, causing the value of the Fund's holdings and share price to decline. • Investors in asset-backed securities, including collateralized loan obligations ("CLOs"), generally receive payments that are part interest and part return of principal. These payments may vary based on the rate loans are repaid. Some asset-backed securities may have structures that make their reaction to interest rates and other factors difficult to predict, making their prices volatile and they are subject to liquidity and valuation risk. • High yield and unrated debt securities are at a greater risk of default than investment grade bonds and may be less liquid, which may increase volatility. • The intrinsic value of the underlying stocks in which the fund invests may never be realized or the stock may decline in value. • When market conditions are deemed appropriate, the fund may leverage to the full extent permitted by its investment policies and restrictions and applicable law. Leveraging will exaggerate the effect on net asset value of any increase or decrease in the market value of the fund's portfolio. • The use of short selling involves increased risks and costs. You risk paying more for a security than you received from its sale. Theoretically, stocks sold short have the risk of unlimited losses. • The fund may invest in derivative instruments, which may be more volatile and less liquid, increasing the risk of loss when compared to traditional securities. Certain of the derivative instruments are also subject to the risks of counterparty default and adverse tax treatment. • Instruments and strategies (such as borrowing transactions and reverse repurchase agreements) may provide leveraged exposure to a particular investment, which will magnify any gains or losses on those investments. • Investments in reverse repurchase agreements expose the fund to the many of the same risks as investments in derivatives. • The fund's investments in other investment vehicles subject the fund to those risks and expenses affecting the investment vehicle. • The fund's investments in foreign securities carry additional risks when compared to U.S. securities, due to the impact of diplomatic, political, or economic developments in the country in question (investments in emerging markets securities are generally subject to an even greater level of risks). • Investments in syndicated bank loans generally offer a floating interest rate and involve special types of risks. • A highly liquid secondary market may not exist for the commodity-linked structured notes the fund invests in, and there can be no assurance that a highly liquid secondary market will develop. • The fund's exposure to the commodity markets may subject the fund to greater volatility as commodity-linked investments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity. • The fund's investments in municipal securities can be affected by events that affect the municipal bond market. • The fund's investments in real estate securities subject the fund to the same risks as direct investments in real estate, which is particularly sensitive to economic downturns. • The fund's investments in restricted securities may involve financial and liquidity risk. • You may have a gain or loss when you sell your shares. • It is important to note that the fund is not guaranteed by the U.S. government. • Please read the prospectus for more detailed information regarding these and other risks.

**Index Definitions** The **ICE® BofA® 3-Month U.S. Treasury Bill Index** is an unmanaged market index of U.S. Treasury securities maturing in 90 days that assumes reinvestment of all income. The **Bloomberg U.S. Aggregate Bond Index** is a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS and CMBS (agency and nonagency).
